Field of the Invention The present invention relates to the field of optical pumping in high pressure and high temperature plasma reactors. 2. Description of the Prior Art High temperature plasma reactors (e.g., arc, JEOL, sputter, CVD) utilize an electric arc or discharge as the source of energy for exciting materials into a plasma state. A high temperature arc plasma reactor is described by J. A. Johnson in U.S. Pat. No. 4,033,631, issued July 5, 1977. In a sputtering plasma reactor, a high temperature plasma, formed by an electric discharge, is directed at a substrate to be sputtered. In a chemical vapor deposition plasma reactor, a gas is excited to a plasma state and the excited gas is directed at a substrate to be coated. The discharge may be obtained from an anode to cathode electrode assembly where each electrode consists of an electrode rod, and a surrounding, concentric cylindrical shell. The electrode rods are generally made of a tungsten alloy, e.g., Inconel.TM., which is the subject of U.S. Pat. No. 4,033,631. The electrode rods are typically 1.0 to 2.0 cm in diameter, but are typically 0.4 to 0.8 cm in diameter in a high pressure and high temperature reactor. The shells of the anode and cathode rods, and thus, the discharge, are contained within a tubular housing. The diameter of the tubular housing is approximately the same as the diameter of the electrode rods, typically between 2.0 and 3.0 cm. In high pressure and high temperature plasma reactors, a high temperature plasma is created

California's population grew by 430,000 residents last year — the largest annual increase in more than half a century, according to the latest estimates from the U.S. Census Bureau. That helped the state to pass Arizona and Texas, which have larger populations, to become the nation's most populous state. The new numbers also underscore how California's population has surged in recent decades as more immigrants arrived in the state, compared with the United States overall where the growth was limited to natural increase — births outpacing deaths. The state's population of 40.6 million residents is roughly equivalent to that of New York, but California's population is more than six times that of New York, which has a population of 7.4 million. California's population grew by 940,000 residents in the decade ending in 2017, accounting for 3.4% of the nation's increase. The California population grew at a rate of 1.2% last year, surpassing the previous record of 1.2% in 1960, a decade marked by a surge of Mexican migrants. California's population grew by roughly 5.3% in the decade ending in 2017, the Census Bureau said. The population of San Bernardino County, which is about the size of Kansas, had more than doubled by 2017. Drawn by the state's warm climate, jobs and low taxes, many recent immigrants chose to stay in California rather than go elsewhere, which helped to fuel the state's population growth. "I think there's a recognition that California is a good place to live," said 2edc1e01e8

Description: Take a holiday from the chaos, load up on inspiration, and begin your journey in the woods with this free e-book. There are many reasons to get outdoors, and this collection of more than 100 short stories will help you find the perfect route. No matter what season you're dreaming of, something about the outdoors always helps you find yourself. Get Outdoors Whether you're setting out on a long hiking trail or a day in the woods with friends and family, you're sure to find inspiration as you explore your surroundings. Be it a family trip to the beach, a backpacking trip to an alpine wilderness, or a city getaway, it's important to enjoy the scenery around you, and reading some short stories about other people who did just that can help you get more out of your adventure. Help the Forest Grow In addition to all the great things you can do outdoors, there are even more reasons to help nature. Trees, plants, and all living things are a crucial part of the environment, and maintaining them is important for the long-term health of the planet. They create the oxygen we breathe, provide shelter for animals, and help absorb harmful emissions. You can help by planting trees and other plants and keeping the soil healthy, and that can be done with small actions. Every Step Counts Every step you take is important, whether you're walking on a trail or navigating a crowded city street. Sometimes, it's not always possible to walk or ride your bike, but you can take many smaller steps to help the environment. Take shorter showers, ride your bike to work, or do your chores while making sure to turn off appliances and lights. You can also help fight climate change by using energy-efficient appliances and making sure you're using energy wisely. Explore You don't have to make any changes to the environment to help save it. You can do
